

Super Group

helps power Logwood Village

Logwood Village was established in 1986 to cater to the needs of intellectually disabled adults in the Gauteng province. Today, the facility provides residential and work services to 105 residents. Their residents range from 18 to 75 years. Many of the older residents have made Logwood Village their home for over thirty years.

Super Group was proud to donate R100 000 in support of the village's solar and aquaponics projects. The solar project will help power the village during loadshedding and reduce costly diesel fuel purchases. Meanwhile, the innovative aquaponics project will help the residents become more self-sufficient. By combining fish farming with hydroponic plant cultivation, this initiative will not only provide Logwood Village with a sustainable source of fresh produce but also ensure the project's economic viability.
